

Honey & Hive Product list

<https://www.snokingbeekeepers.org/>

Raw honey is represented on honey color scale from light (or white) honey that is very sweet, to a dark amber color that is less sweet with a more profound robust flavor. The color variant is due to the available local flora or vegetation nectar collected by Honey Bees brought back to the hive.

Following is a list of raw, unpasteurized honey for sale from SnoKing Beekeepers.
